RESCUE Intellitech Launches Single-Phase Version of the Solo Rescue® Decon Washer, Expanding Accessibility to Fire Departments all over the Americas

RESCUE Intellitech addresses market demand with a new single-phase Solo Rescue® decon washer, redefining firefighter safety. The new innovative solution expands accessibility and is now available to all fire stations in the Americas regardless of power supply.

KATY, Texas, November 7, 2023 – RESCUE Intellitech, a leading provider of innovative solutions for the firefighting and rescue services industry, is excited to announce the launch of the single-phase version of their highly acclaimed Solo Rescue® decon washer. The introduction of this new variant is set to revolutionize the industry by offering enhanced accessibility and expanded opportunities for fire departments in the Americas.

The Solo Rescue decon washer, originally available exclusively with a three-phase electrical power supply, has gained significant recognition for its exceptional performance in reducing dangerous carcinogens found in firefighters' personal protective equipment (PPE). However, the requirement for three-phase power has posed a challenge in regions where this type of electrical supply is not readily available, leading to higher installation costs and limited adoption. As a response to the persistent demand from the firefighting community, RESCUE Intellitech has developed a game-changing solution—the single-phase version of the Solo Rescue decon washer.

"Four years ago, RESCUE Intellitech launched the Solo Rescue decon washer to the North American markets. Since then, we have had great success and today more than 300 units have found a home at fire stations in North America helping fire departments reduce their exposure to carcinogens," said Bjorn Rowland, Vice President Sales & Marketing Americas at RESCUE Intellitech. "With the launch of the single-phase version we have now made the Solo Rescue available to all fire stations in the Americas, regardless of power supply."

The new single-phase Solo Rescue decon washer retains all the exceptional features and functionalities of its three-phase counterpart. Fire departments can still effortlessly decontaminate their PPE, including SCBAs, face masks, boots, gloves, and helmets, while significantly reducing exposure to carcinogens such as PAH compounds. Additionally, the machine's clever basket system enables the cleaning of diverse types of PPE, ensuring comprehensive decontamination capabilities.

The release of the single-phase Solo Rescue decon washer marks an important milestone for RESCUE Intellitech as they continue to lead the industry in providing state-of-the-art solutions for firefighter safety and well-being. This groundbreaking innovation reflects the company's dedication to meeting customer needs and revolutionizing the firefighting and rescue services sector.
